

LANDSCAPE DESIGN PROPOSAL

A Garden *Vision*

Prepared for Justin

Your property already has great bones: mature trees, dramatic natural rock and a striking modern home. This proposal shows how we'd bring it together into a calm, low-maintenance landscape that looks just as good at night as it does by day.

The Rock Garden Slope

From overgrown hillside to a walkable, meadow-style garden

McCahill & Co.

PREPARED FOR JUSTIN

What's there now. Beautiful natural rock and mature trees, but the slope has turned into patchy grass and weeds. There's no easy way to walk through it, and the plants are scattered rather than working together.

The design. Gently winding gravel paths let you walk the whole slope. Between them, drifts of soft ornamental grasses and silver-leaved perennials move in the breeze. The existing trees and stone are kept and shown off as features.

Landscape lighting. Warm, low-glare path lights guide the way, and uplights make the trees glow. The result is safe to walk at night and turns the garden into a view from inside the house.

LANDSCAPE WORKS

- Clear weeds and tired turf; regrade and prepare the slope
- Build meandering gravel paths on a compacted base with clean edges
- Plant drought-tolerant grasses and silver perennials in natural drifts
- Retain and feature existing trees and natural stone

LIGHTING

- Low-voltage warm-white LED system
- Path lights along the gravel walks
- Uplights on the feature trees
- Automatic dusk-to-dawn timer control

O2 The Side Walkway

From a forgotten storage strip to a clean, modern entry path

McCahill & Co.
PREPARED FOR JUSTIN

THE VISION

PHOTO PENDING

AFTER DARK

PHOTO PENDING

What's there now. A narrow strip of bare, compacted soil along the house. It has become a catch-all for bins, ladders and leftover materials, and it doesn't match the quality of the home.

The design. Large-format concrete stepping pavers run the length of the side yard, set in a bed of smooth river rock. Weathered steel planters with soft ornamental grasses surround the existing trees. The look is crisp, modern and suits the architecture.

Landscape lighting. Low fixtures along the foundation wash soft light up the siding and across the path. Uplights in the planters make the trees and grasses glow, so the side of the house is safe and welcoming after dark.

LANDSCAPE WORKS

- Clear and level the side yard; compacted base with weed barrier
- Large-format concrete stepping pavers set in river rock
- Two weathered-steel (Corten) planters around the existing trees
- Ornamental grass planting; clean edge along the foundation

LIGHTING

- Low-voltage warm-white LED, tied into the main system
- Wall-wash lights along the foundation
- Planter uplights on the trees and grasses
- Automatic dusk-to-dawn timer control

The Garden Walk

A worn dirt track becomes a planted, lantern-lit path

McCahill & Co.
PREPARED FOR JUSTIN

THE VISION

PHOTO PENDING

AFTER DARK

PHOTO PENDING

What's there now. A strong setting: a raised concrete planter along the brick wall, a lovely specimen tree and big natural boulders. But the path is worn to dirt and dead grass, and the planter is bare after the old climbers were cut back.

The design. The same concrete stepping pavers and river rock as the side walkway carry around the house, so the whole property feels connected. Soft ornamental grasses fill the raised planter and drift between the boulders. The specimen tree stays as the focal point.

Landscape lighting. Slim path lights line the walk, small lights in the planter wall graze the concrete, and the grasses and specimen tree are softly uplit. Together with the existing soffit lights, the path glows warm and inviting.

LANDSCAPE WORKS

- Remove dead turf; level and prepare a compacted base with weed barrier
- Large-format concrete stepping pavers in river rock, matching Area 02
- Replant the raised planter with ornamental grasses and river-rock mulch
- Grass drifts around the existing boulders; specimen tree retained

LIGHTING

- Low-voltage warm-white LED, tied into the main system
- Path lights along the walk
- Planter-wall accent lights and grass uplights
- Uplight on the specimen tree

INVESTMENT SUMMARY

Bringing the *vision* to life

AREA	LANDSCAPE	LIGHTING	TOTAL
01 The Rock Garden Slope	TBC	TBC	TBC
02 The Side Walkway	TBC	TBC	TBC
03 The Garden Walk	TBC	TBC	TBC
04 Area four	—	—	—
05 Area five	—	—	—
Complete project			TBC

Prices are estimates based on the concept designs shown and may be refined after a final site measure. Areas can be done together or in phases. Design images are artist's impressions: final plant sizes, placement and light effects will vary, and new plantings take a season or two to fill in.

NEXT STEPS

- 01

Review the vision

Take your time with the designs and let us know what you love and what you'd change.
- 02

Walk the site together

We'll confirm measurements, plant choices and light placement with you on site.
- 03

Final quote & schedule

You'll get a fixed quote and a start date. Phasing the work is always an option.
- 04

Build & switch on

We install the garden and lighting, then walk you through care and controls.
